DETAILED ACTION

1. This Office action is in response to application No. 09/927,292, filed on 08/13/2001.

2. Claims 1-3 are pending.

Claim Rejections - 35 USC § 102

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-3 are rejected under 35 U.S.C. 102 (e) as being anticipated by Wang (U.S. pat. No. 6,282,656).

As per claims 1-3 Wang discloses a method for completing a transaction request pertaining to an electronic transaction conducted over an electronic network having a server and a requesting device. A portable electronic authorization device for executing approval transaction request (which is readable as Applicant's claimed invention wherein said an electronic apparatus for providing security of specified electronic transactions), comprising:

Art Unit: 3621

An article removably (item 200) inserted into the personal electronic apparatus, the article bearing machine readable code (see., figs 3A, 3B and fig 4, abstract, col 5, lines 10-67, col 7, lines 8-39);

Customer-specific code installed on the personal electronic apparatus, the code affecting operation of the personal electronic apparatus (see., figs 2, 3A, 3B and fig 4, abstract, col 5, lines 10-67, col 7, lines 8-39, col 8, lines 8-67, specifically encryption code or logic);

Verifying means for determining whether the article is installed in the personal electronic apparatus, and if so, for enabling specified electronic transactions, but, if not, for preventing said transactions (see., figs 2, 3A, 3B and fig 4, abstract, col 5, lines 10-67, col 7, lines 8-39, col 8, lines 8-67, specifically wherein said approval transaction device associated with the requesting terminal..., fig 11);

Whereby, upon a request for specified electronic transactions by the user, the personal electronic apparatus queries whether the article is installed, and, if so, enables specified transactions to be performed at the request of the user, but prevents the transaction from being performed if the article is not installed (see., figs 2, 3A, 3B and fig 4, abstract, col 5, lines 10-67, col 7, lines 8-39, col 8, lines 8-67, specifically wherein said approval transaction device associated with the requesting terminal..., fig 11, col 15, lines 30-67, col 16, lines 8-55).
